Assignment 2 (5%)
Submission and presentation is on Week 7

Title: Personal Website Landing Page Creation Using HTML 5 and CSS Grid Layout

Your task is to design and develop only **one page of the** Personal Website Landing Page using HTML and CSS Grid layout. Use your content for this assignment. **Choose only one theme among the following themes.** Use the web browser inspect element tool to identify website specifications and elements (such as the specification of div, image, colour, etc.) of your chosen theme

- Theme 1: https://filipecampante.org/
- Theme 2: https://users.ece.cmu.edu/~pileggi/
- Theme 3: https://demo.templatemonster.com/demo/218225.html

Follow the guidelines below:

1. **HTML Grid Layout:**
    - Begin by creating a standard HTML document with CSS Grid to structure the layout.
    - Organize the webpage into the following spaces (if any) using CSS Grid:
        - Header
        - Left Menu
        - Right Menu
        - Content
        - Footer
2. **Header:**
    - Incorporate an image that represents your brand or interests.
    - Include a welcoming heading that introduces visitors to your website.

3. **Left Menu and Right Menu:**
    - Create navigational menus for users to explore different sections of your website.
    - Populate both menus with relevant links and sections.

4. **Content:**
    - Use this section to showcase your personal information, interests, achievements, or any other content you'd like to highlight.
    - Include descriptive text and at least one image that complements the content.
    - Ensure that the content is engaging and reflects your personality.

5. **Footer:**
    - Provide a footer section at the bottom of the page.
    - Include a copyright notice along with any additional information you deem necessary.

6. **Styling:**
   - Apply CSS styling to enhance the visual appeal of your webpage.
   - Use appropriate colours, fonts, and spacing to create a cohesive design.
   - Ensure that the layout is responsive and displays well on various devices.

7. **Personalization:**
   - Customize the design and content of your webpage to reflect your personality, interests, and style.
   - Add personal touches such as background images, custom icons, or unique design elements.

8. **Documentation:**
   - Provide comments (internal comments) in your HTML and CSS code to explain the purpose of each section and any styling decisions you've made.
